

## Claims

1. A computer system having a plurality of input devices for a computer, comprising:

an input device recognition information keeping unit for keeping recognition information that allows a double-click to be recognized for each of the input devices;

a double-click determining unit for determining consecutive clicks performed by using said input device to be a double-click based on the recognition information kept by said input device recognition information keeping unit; and

an information notifying unit for, in case of being determined to be a double-click by said input device by said double-click determining unit, notifying an operating system of the information that is recognizable by the operating system as a double-click.
